PROFILE

Data analyst working across Python, SQL, and BI tools (Power BI, Tableau, Excel) — built an e-commerce analytics pipeline with statistical testing and a Power BI dashboard, plus an Excel dashboard from 12,900+ job postings. I like tracing messy data back to the one insight that matters.

SKILLS

Languages & Analysis: Python (Pandas, NumPy, SciPy), SQL, Excel (Power Query, Pivot Tables)

Visualization & BI: Power BI, Tableau, Matplotlib, Seaborn

Statistics: Hypothesis Testing, T-Tests, Correlation Analysis, Regression Models

Databases/Tools: SQLite, Jupyter Notebook, VS Code, Git/GitHub

Other Technical: JavaScript, React.js, Node.js/Express.js, MongoDB, REST APIs

PROJECTS

Olist E-Commerce Analytics

[GitHub](#)

Python, Pandas, SQL, SciPy, Power BI

- Cleaned and explored a 9-table e-commerce dataset in Python across 8 notebook sections — revenue, delivery times, review patterns.
- Queried a SQLite version of the same data with joins, CTEs, and window functions, then ran a t-test to check if late deliveries actually hurt review scores — they did (4.29 vs 1.76 average).
- Also ran a Pearson correlation on delivery delay vs. review score — same conclusion as the t-test, from two different angles, so the finding wasn't resting on one test alone.
- Built a 3-page Power BI dashboard so the findings didn't just live in a notebook — KPI cards, revenue trends, delivery-vs-satisfaction breakdown.

What Do Employers Actually Want from a Data Analyst?

[GitHub](#)

Excel, Power Query, Pivot Tables

- Pulled apart a job-skills column that crammed multiple skills into one field, splitting ~12,900 postings into 229,000+ rows in Power Query so each skill could actually be counted.
- Realized the skill-split rows would double-count postings in the location and job-level pivots, so I built a second query with one row per posting just for those.
- Built four Pivot Tables to see what employers ask for by skill, location, job level, and job type — Data Analysis, SQL, and Excel came out ahead of Python.
- Turned it into a one-page dashboard with charts and slicers, published on GitHub.

EXPERIENCE

MoovOn Services & Solutions

Bhubaneswar, India

MERN Stack Intern

Oct 2025 – Mar 2026

- Built REST APIs with full CRUD support, spending more time on how the data was structured and queried than on just wiring up endpoints.
- Split time between frontend and backend work — adjusting the database schema one sprint, then making sure the data it held actually came through right on the other end.

Technoboot Pvt. Ltd.

Bhubaneswar, India

MERN Stack Intern

June 2024 – July 2024

- Handled the data flow between the frontend and MongoDB through Express-based APIs — my first real exposure to seeing how data actually moves through an app, not just how it looks on screen.

OCAC Training Center

Bhubaneswar, India

Java Intern

June 2023 – July 2023

- Wrote Java applications applying core OOP principles, with a heavy focus on debugging and testing — a habit I still lean on when something in a dataset doesn't add up.

EDUCATION

GIFT Autonomous

Bhubaneswar, India

Bachelor of Technology in Computer Science and Engineering

2022 – 2026

- CGPA: 8.09/10

CERTIFICATIONS
